an indispensable guide to the dramatic work of one of america s most important contemporary playwrights

biologists stephen jay gould richard dawkins and edward o wilson and physicists carl sagan stephen hawking and steven weinberg have become public intellectuals articulating a much larger vision for science and what role it should play in the modern worldview the scientific prestige and literary eloquence of each of these great thinkers combine to transform them into what can only be called oracles of science curiously the leading oracles of science are predominantly secular in ways that don t reflect the distribution of religious beliefs within the scientific community many of them are even hostile to religion creating a false impression that science as a whole is incompatible with religion karl giberson and mariano artigas offer an informed analysis of the views of these six scientists carefully distinguishing science from philosophy and religion in the writings of the

oracles

biocivilisations is a fascinating original and important exploration into how complex civilisations existed on earth long before humans what is life this is arguably the most important question in all of science many scientists believe life can be reduced to mechanistic factors such as genes and information codes everything can be sequenced and explained but in a world as rich and complex as this one can such an assertion really be true a growing army of scientists philosophers and artists do not share this mechanistic vision for the science of life the gene metaphor is not only too simplistic but also misleading if there is a way to reduce life to a single principle how does that principle acknowledge the creativity of life that turns both genetic and information determinism on their heads biocivilisations is a groundbreaking book exploring the mysteries of life and its deep uncertainty dr predrag slijepčević turns anthropocentric scientific thinking on its head showing how the humble bacteria created the equivalent of cities and connected them with information highways bringing our planet to life three thousand million years ago he explains how bacteria amoebas plants insects birds whales elephants and countless other species not only preceded human beings but also demonstrate elements of complex civilisation communication agriculture science art medicine and more that we associate with human achievement more than 99.99 percent of life on earth has existed without humanity and life will continue without humans long into the future biocivilisations is an important rethinking of the current scientific paradigm it challenges us to reconsider the limited scope and time window of our current scientific revolution and to fundamentally reimagine what we call life on earth

our world is far richer than previously conceived yet so ravaged by human activity that half its species could be gone by the end of the 21st century these two contrasting themes unexpected magnificence and underestimated peril have originated since the 1980s in this book scientist e o wilson describes exactly what treasures of the natural world we are about to lose forever and what we can do right now to save them destruction of natural habitats the rampant spread of invasive species pollution uncontrolled population growth and overharvesting are the main threats to our natural world wilson explains how each of these elements works to undo the web of life that supports us and why it is in our best interests to stop it the book is both a moving description of the world's astonishing animals and plants and a guidebook for the protection of all its species including our own
